

## Benelux distribution

Van den Anker is operating an own fleet of 100 vehicles, with different specifications, for Benelux distribution. All vehicles are equipped according to the latest ADR specifications. Based on a transit time of 24 to maximum 48 hours we cover destinations in the Netherlands, Belgium, Luxemburg and the German Ruhr area and achieve a performance of 98 percent on delivery-reliability. The majority of our vehicles is equipped with a tail-lift in order to optimize the efficiency and security during loading and unloading of shipments. Within our portfolio we also offer reverse logistics for empty packaging material.

## Automated route-planning

The rides are by region compiled by a fully automated scheduling system. This system is fully integrated with our ERP system. This allows optimal and efficient routes can be ridden

## Tracking & tracing

With relationships it is preferably to communicate via EDI or through our customer-friendly Web portal solutions, while up-to-date information about relationship episodes per day is available from our website

[www.vandenanker.com](http://www.vandenanker.com)

*"As a customer of Van den Anker, I receive daily up-to-date information about my episodes, through the website [www.vandenanker.com](http://www.vandenanker.com)*

*"Real-time delivery addresses can also receive an URL on the scheduled delivery time, very friendly!"*

  - Charleroi

## European distribution

Besides the Benelux-distribution with our own fleet of vehicles it is obvious, that we also look after distribution to other European destinations. In the case that own vehicles are not available we co-operate closely with selected partners, who work according to the same standards as Van den Anker with respect to reliability and security – as is laid down in our ISO quality system.
