

Locations

Van den Anker has a PGS-15 storage capacity of over 100,000 pallet positions spread over four sites centrally located in the Benelux and Europe.

The Warehouse Management System provides a flexible and optimal use of space and personnel requirements. Barcoding, EDI and automated warehouses ensure an efficient information processing.

Within the different branches there are different compartments available. These range varies in size from 1,000 sqm to 2,500 sqm per compartment, the goods to various specific hazard class are stored.

The Logistics process

All aspects of the logistics process are arranged 'in house' and involve the inbound flow, stock control and the outbound flow.

Within the area of stock control it is possible to specify the different registration criteria, such as registration on serial number, production date, expiration date, first in/first out etc.

All possible additional activities such as remarking, repacking, order picking, labelling, rush shipments and making orders customer related are handled by high educated and well trained people, who are used to handle hazardous products on a daily basis.

Besides that we offer possibilities for support on the administrative and operational sides of the logistics process. Areas you can think of are invoicing, callcenter-function and logistics consultancy.
